Thank you for visiting St. Petersburg College. We hope your visit is pleasant. In order to connect to SPC’s wireless network with your corporate laptop, please follow the steps below:

1. Locate and **right-click** the wireless connections icon near your clock. **Left-click** Open Network and Sharing Center.

2. Locate and click **Manage wireless networks** on the left side of the window as shown below.
3. Above your list of connected networks, click the **Add** option to create a new network profile.

4. Click the option for **Manually create a network profile** by clicking the icon next to the heading.
5. Enter the following information as instructed below:

   - **Network name**: SPCWifi
   - **Security type**: WPA2-Enterprise
   - **Encryption type**: AES (if not already selected)

   Leave all other options set to their default options, and then click **Next**.

6. Click the **Change connection settings** in order to finalize configuration to connect.
NOTE: You will likely see this pop-up appear after creating the network profile. Ignore this pop-up until instructed to do so in this document.

7. In the SPCWifi Wireless Network Properties window, click the Security tab.
8. Leave all options default on this page, especially **Remember my credentials for this connection each time I’m logged on** which will allow frequent visitors to automatically connect. However, click the **Settings** button.

9. Leave all options default on this window, but click **Configure** next to the authentication method selection.
10. **Uncheck** the option to **Automatically use my Windows logon name and password (and domain if any)**. This is required for your computer to allow you to enter SPC’s wireless username and password.

11. Click OK on each window to confirm changes. You will likely see this pop-up appear again. At this time, click it in order to enter the SPC wireless username and password (your host should have the current credentials).

![Additional information is needed to connect SPCWifi](image2)

12. Enter the username and password that is provided by your event host. **If you are a SPC student or faculty/staff member, please enter your credentials instead of the SPC guest credentials.**

![Windows Security](image3)
13. You will likely see this pop-up appear again after entering the wireless login credentials. Click it again.

14. Due to computer security settings, your computer will most likely prompt to connect to the wireless network by displaying a screen similar to this. You **MUST** click Connect in order to complete the connection process.

15. Finally, you should see SPCWifi in a Connected status. Your connection process is now complete and you may proceed with your normal activities.

If you experience issues with the wireless network, please contact your event host who may contact technical support personnel to assist.
